Employer Data Filters and Export

Map now shows employer data in addition to the demographic layers.

A built-in filter option (top right filter icon) is available to filter by employer types of interest:

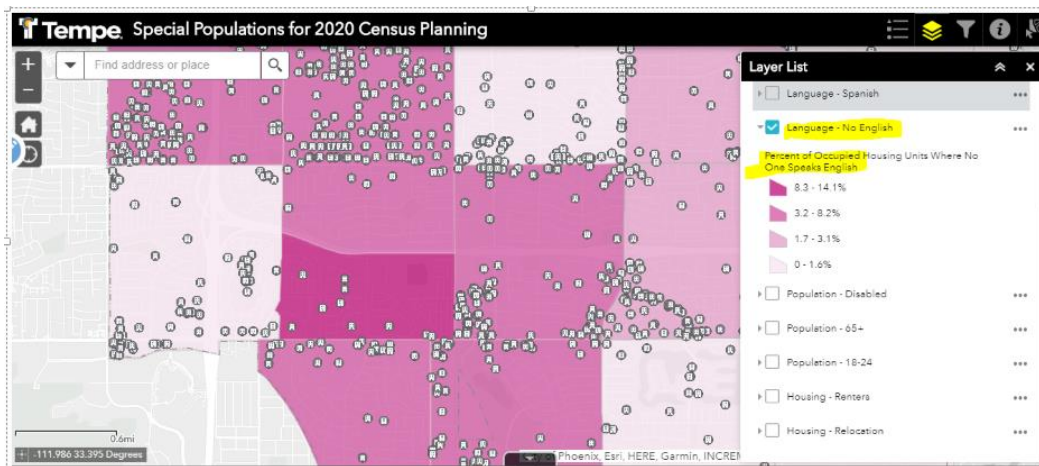

Filtered results may be exported to a CSV (Excel) spreadsheet (go to Table --> Options --> Export all to CSV).

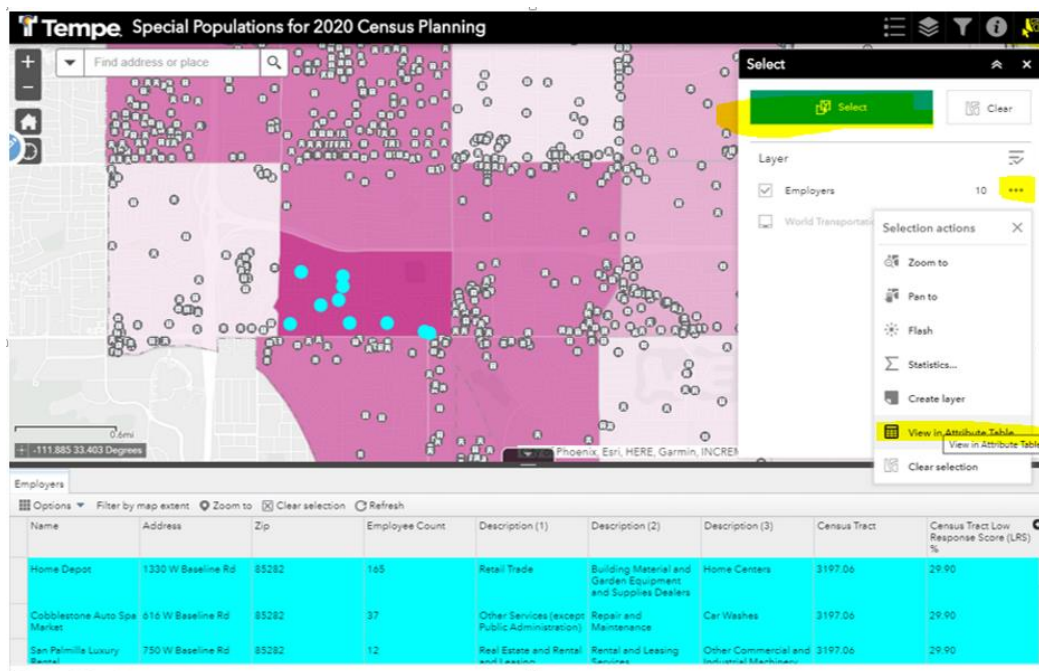

Please note that employer data was provided by the Maricopa Association of Governments and not all businesses or requested business group types are available.

Demographic Layers and Selections on Map

You may toggle the demographic layers on the map (best viewed one at a time by selecting layers on the layer list).

You may also find it helpful to select employers based on areas on the map (Select --> draw selection area on map --> Go to ellipses (...) --> View in Attribute Table --> Options --> Export all to CSV).

Please keep in mind that:

- Exported table document will only export filtered results
- Additional data such as phone numbers and contact persons will need to be added to your data resources through your own research
